Tom Kuhn

In 1976 Tom Kuhn received a wooden yo-yo as a gift. He hadn't seen one since the 50's. When it broke on the first day, a quest for the perfect yo-yo began. He started by using nothing more than jigsaw and sandpaper. These crude early models were quickly replaced with models featuring a replaceable wooden axle. Tom fulfilled his patriotic duty in 1985, when he became a NASA consultant, designing yo-yos for the *Toys in Space* project.

Silver Bullet 2

You can make it sleep better, or you can make it loop better. You can customize the string gap to suit your needs, making your yo-yo distinctly for YOU! Unlike most adjustable string gap yo-yos, the SB2 will not slip out of adjustment when thrown, but stays firmly in place. The SB2 was designed in part for NASA and it became the first yo-yo in space! It comes in a gift box with flight manual, strings, velvet pouch, and a string gap tool. The Original Silver Bullet 2 is silver aluminum in color, the SB2 anodized is available in a red, gold, blue and violet or you can get the spectrum colors for that extra touch of elegance (infra-red, gamma green, ultra-violet)

Yo-Yo Books

Yonomicon by Mark McBride.

No, not that McBride, this is the other one. The Yonomicon is a quantum leap forward in yo-yo books. It starts where the rest leave off. It covers the parts of tricks instead of the whole, and then teaches you how to link them up into new and ever more impressive routines. It's a book on how to make tricks and what's more, it has style. 150 pages, 450+ illustrations. #YB06 \$15.00
